

# Virus scanner

The following two folders from the root directory must be excluded from the automatic antivirus scanning, so as not to overwhelm the processor with ongoing, unnecessary scans of these data and thus to avoid PC CADDIE losses in performance:

- DATEN
- INDEX

In addition, the entire local program directory, for example C:\PCCADDIE should be added to exception list.

You can use the macro `ver` to check the location of the local PC CADDIE directory.

Please consult your IT support regarding the required settings.
